

Q1 Compare two popular operating system & use.

Android and windows are mostly used by me as operating systems. But both are use for different purposes. Android uses in phone, table, watch and window use in PC and laptop.

↳ Android is easy for daily life use. It use such as browsing, social media and gaming for its intuitive touchscreen interface.

↳ Windows is better for heavy uses and its mainly use for professional work like coding, designing and document writting And its support big powerfull desktop's applications.

↳ Android have mostly mobile-related functions like GPS navigation, calling and app interaction

↳ Windows is known for heavy tasks like video editing, large-scale software development and running complex applications

I prefer windows because it offers me more functionality for productive work but android is great option for me daily life use, such as entertainment.
